

DR360

DISASTER RECOVERY AS A SERVICE (DRAAS)
FOR VIRTUALISED ENVIRONMENTS

SIMPLE • FAST • EFFECTIVE
DATA PROTECTION AND RECOVERY

Simplify your disaster recovery with Synapse360's DR360, Disaster Recovery as a Service. DR360 delivers an enterprise class, all in one, disaster recovery solution for virtualised environments. It's production ready in minutes, needs no infrastructure changes and requires just a few clicks to orchestrate and automate the entire recovery process.

The traditional approach to DR is often complex and involves multiple technologies, which means more training, more reliance on individual staff members, more management overheads, more testing, and more cost. All this increases the risk that your organisation cannot successfully recover from a disaster.

Our DR360 service uses proven, enterprise class technology that replicates at the hypervisor layer, as opposed to storage LUN-based systems, which allows for greater flexibility and granular control. Apps and data are replicated to our UK based, secure and fully ISO27001 accredited data centre.

SYNAPSE360 DR360 GIVES YOU

All in one solution for replication and recovery. Installable and replicating in minutes, not weeks.

There are no snapshots or agents, meaning zero performance impact to the applications.

Recover any virtual machine or your entire infrastructure to any point in time with "Tivo" like capabilities. Rewind and recover individual files.

Fully automates the entire failover and failback process with non-disruptive DR testing, providing seamless recovery capabilities. RTO's measured in minutes.

Real-time block level replication with RPOs in seconds.

No more testing on weekends or off hours—Synapse360 does fail-over and fail-back tests during business hours.

Replicates the virtual machines, not LUNs.

Flexible SLA options, no ingress/egress charges and competitive pricing.

Customer self-service web portal to test and failover without service provider assistance, recover your infrastructure from any device, anywhere.

Provides storage agnostic replication—any storage can be used as the source.

SYNAPSE360 DR360 GIVES YOU

It's hypervisor agnostic too, including cross-hypervisor replication and migration support for VMware vSphere and Microsoft Hyper-V.

Is software only so it scales easily and installs seamlessly into your existing infrastructure with no configuration changes.

Fully managed service, with monitoring and support included.

Pay as you go, consumption based flexible monthly billing.

Achieve DR compliance in minutes.

You can use the Synapse360 DRaaS just to protect specific workloads.

Your data will be held in a secure UK based ISO27001 accredited data centre.
